XII Conference on Reconnaissance and Electronic Warfare Systems

Piotr Kaniewski
Editor

19–21 November 2018
Ołtarzew, Poland

Organized by
Military University of Technology (Poland)

Sponsored by
General Staff of the Polish Armed Forces (Poland)
Electronics and Telecommunications Committee of the Polish Academy of Sciences (Poland)

Published by
SPIE

Volume 11055

Mechanisms of immunization of broadband radio stations for targeted interference [11055-15]

Testing of the detector based on the Faraday effect for the detection of high-power electromagnetic pulses [11055-16]

Selected properties and parameters of radio channel impulse response estimation in ISM 2.4-GHz band [11055-17]

Verification of the criterion and measures of interferences used in radio planning systems [11055-18]

The assessment of efficiency of the automatic speaker recognition system for voices registered using a throat microphone [11055-20]

The efficiency evaluation concept of the HF jamming based on propagation prediction model ITU-R P.533 [11055-21]

Electronic warfare systems supporting the database of the Radio Environment Maps [11055-22]

Synchronous surge generator: source of ultra-high power pulses [11055-23]

Properties of the monopulse direction finding of microwave sources in an environment with many emitters [11055-25]

A concept of a microwave seeker designed for an anti-radiation missile [11055-26]

Prospects of simultaneous localization and mapping algorithms application in imagery intelligence [11055-27]

Secure voice transmission in the coalitional communication [11055-28]

Removal of conflicts in fusion of identification information from ELINT-ESM sensors [11055-29]

PSO algorithm for UAV autonomous path planning with threat and energy cost optimization [11055-30]

The algorithm for computation of the time difference of arrival for a secure zone monitoring system [11055-31]

Comparison of two classifiers based on neural networks and the DTW method of comparing time series to recognize maritime objects upon FLIR images [11055-32]

Analysis of estimation algorithms for electromagnetic source localization [11055-33]

Processing output voltages of a single-function microwave frequency detector [11055-34]

Tracking of land vehicle motion with the use of distance measurements [11055-35]

Application of fusion of two classifiers based on principal component analysis method and time series comparison to recognize maritime objects upon FLIR images [11055-36]

Authors

Numbers in the index correspond to the last two digits of the seven-digit citation identifier (CID) article numbering system used in Proceedings of SPIE. The first five digits reflect the volume number. Base 36 numbering is employed for the last two digits and indicates the order of articles within the volume. Numbers start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B...0Z, followed by 10-1Z, 20-2Z, etc.

Introduction

Increasingly, the modern world has become more and more dependent on electronics and information. The use of radio-electronic systems in communication, navigation, reconnaissance, and electronic warfare have become widespread.

The issues of both reconnaissance and electronic warfare are becoming increasingly important. This area of human activity requires monitoring for broadly understood security purposes, and, if necessary, the ability to retake control over the technology or prevent it from being disrupted. As a result, these activities, which until recently have been the exclusive domain of armed forces, are now also beginning to play a significant role in the activity of other state services and governmental bodies.

The issues presented at the Reconnaissance and Electronic Warfare Systems (CREWS) conference are priorities for the Polish Armed Forces (as well as other state services) emphasizing the fact that this conference was organized under the auspices of the Chief of General Staff. The scope of issues discussed during the conference has been gradually expanding. The topics of this conference included: issues related to the current state, needs, and requirements in the field of reconnaissance and electronic warfare; image and optoelectronic reconnaissance; satellite recognition; the use of unmanned aerial vehicles in reconnaissance and electronic warfare; information security; coordination of activities on a national scale; techniques and methods of electronic warfare; and data processing in reconnaissance and electronic warfare systems.

In addition, the conference was supported by the scientific patronage of the Electronics and Telecommunications Committee of the Polish Academy of Sciences. The group of institutions interested in active participation in the conference is systematically expanding, which favors the integration of the environment dealing with the issues of reconnaissance and electronic warfare.

This year's edition of the CREWS conference was an opportunity to exchange the knowledge and experience between users, producers, and scientists involved in the use and construction of reconnaissance and electronic warfare systems. The conference was also a place for bilateral talks and networking.
