PHOTONICS ACTIVE DEVICES

7009 02 Quantum dot photonics: edge emitter amplifier, and VCSEL [7009-01]
F. Hopfer, M. Kunert, M. Lämmlin, G. Fiol, Technische Univ. Berlin (Germany); N. N. Ledentsov, Technische Univ. Berlin (Germany) and NL Nanosemiconductor GmbH (Germany); A. R. Kovsh, S. S. Mikrin, NL Nanosemiconductor GmbH (Germany); I. Klaeunder, Technische Univ. Berlin (Germany); V. Hasler, Technische Univ. Berlin (Germany) and Institute of Semiconductor Physics (Russia); A. Lochmann, A. Mutig, Technische Univ. Berlin (Germany); C. Schubert, Fraunhofer Heinrich-Hertz-Institut Berlin (Germany); A. Umbach, U2T Photonics AG (Germany); V. M. Ustinov, A.F. Ioffe Physico-Technical Institute (Russia); U. W. Pohl, D. Bimberg, Technische Univ. Berlin (Germany)

7009 03 VCSEL polarization control by monolithic surface gratings: a survey of modelling and experimental activities [7009-02]
P. Debernardi, Politecnico di Torino (Italy); J. M. Ostermann, Politecnico di Torino (Italy) and Univ. of Ulm (Germany); R. Michalzik, Univ. of Ulm (Germany)

7009 04 Silicon optical bench for flip-chip integration of high speed widely tunable lasers [7009-03]
M. Chacinski, Royal Institute of Technology (Sweden); A. Scholes, Acreo AB (Sweden); R. Schatz, Royal Institute of Technology (Sweden); P. Ericsson, Acreo AB (Sweden); M. Isaksson, Royal Institute of Technology (Sweden) and Syntune AB (Sweden); S. Hammerfeldt, Syntune AB (Sweden)

7009 05 Frequency tuning of diode laser radiation by surface acoustic wave [7009-04]

7009 06 Some electro-physical properties of InSb and InAs layers that were received with the help of methods of relaxed optics [7009-05]
P. P. Trokhimchuck, Lesya Ukrainka Volyn State Univ. (Ukraine) and International Scientific Technical Univ. (Ukraine)

7009 07 A new compact high brilliance diode laser type [7009-06]
F. Bammer, B. Holzinger, Vienna Univ. of Technology (Austria)

7009 08 Magnetic field influence on MQW laser [7009-07]
A. F. Boya, Salahaddin Univ. (Iraq); A. I. Abdullah, Mosul Univ. (Iraq)
7009 09  Reflection spectrum of the top mirror in ICOC VCSELs taking into account uniform temperature distribution [7009-08]
A. A. Dyomin, Kharkiv National Univ. of Radio Electronics (Ukraine); V. V. Lysak, Kharkiv National Univ. of Radio Electronics (Ukraine) and Gwangju Institute of Science and Technology (South Korea); I. O. Zinkovska, Kharkiv National Univ. of Radio Electronics (Ukraine)

7009 0A  Calculation of the spontaneous emission spatial dependency in semiconductor lasers using transmission line model [7009-09]
M. Razaghi, Tarbiat Modares Univ. (Iran); V. Ahmadi, Tarbiat Modares Univ. (Iran) and Atomic Energy Organization of Iran (Iran); B. H. S. Mahalleh, Tarbiat Modares Univ. (Iran); A. Zarifkar, Iran Telecommunication Research Ctr. (Iran)

7009 0B  Influence of laser diode parameters on the performance of Mach-Zehnder modulator [7009-10]
S. Q. Mawlud, Univ. of Salahaddin (Iraq); M. I. Azawi, Univ. of Mosul (Iraq)

7009 0C  Analysis of facet heating in semiconductor lasers [7009-11]
D. Wawer, T. J. Ochalski, K. Pierściński, M. Szymański, M. Bugajski, Institute of Electron Technology (Poland); Ł. Piskorski, K. Gutowski, Technical Univ. of Łódź (Poland); A. Kozłowska, A. Maląg, Institute of Electronics Materials Technology (Poland)

WAVE PROPAGATION AND NONLINEAR OPTICS

7009 0D  The influence of photonic crystal parameters on photonic band-gaps [7009-12]
A. V. Dyogtyev, Kharkiv National Univ. of Radio Electronics (Ukraine); I. A. Sukhoivanov, Kharkiv National Univ. of Radio Electronics (Ukraine) and Univ. of Guanajuato (Mexico); R. M. De La Rue, Univ. of Glasgow (United Kingdom)

7009 0E  New phenomena at stimulated Brillouin scattering of Laguerre-Gaussian laser modes: theory, calculation, and experiments [7009-13]
F. A. Starikov, Yu. V. Dolgopolov, A. V. Kopalkin, G. G. Kochemasov, S. M. Kulikov, S. A. Sukharev, Russian Federal Nuclear Ctr. - VNIEF (Russia)

7009 0F  Collisions of spatial solitons in optically induced lattices [7009-14]
O. G. Romanov, Belarusian State Univ. (Belarus)

7009 0G  Soliton solution of nonlinear Schrodinger equation with application to Bose-Einstein condensation using the FD method [7009-15]
K. Abedi, V. Ahmadi, Tarbiat Modares Univ. (Iran) and Atomic Energy Organization of Iran (Iran); S. Gholmohammadi, Tarbiat Modares Univ. (Iran) and Iran Telecommunication Research Ctr. (Iran); E. Darabi, Atomic Energy Organization of Iran (Iran); M. H. Yavari, Tarbiat Modares Univ. (Iran)

7009 0H  Photonic molecule modes in coupled spherical microcavities with CdTe nanocrystals [7009-16]
K. I. Rusakou, A. A. Gladyschchuk, S. V. Chugunov, Brest State Technical Univ. (Belarus); Y. P. Rakovich, Brest State Technical Univ. (Belarus) and Trinity College Dublin (Ireland); J. F. Donegan, Trinity College Dublin (Ireland); A. L. Rogach, Univ. of Hamburg (Germany); N. Gaponik, Ludwig-Maximilians-Univ. München (Germany)

Introduction

The Second International Conference on Advanced Optoelectronics and Lasers, CAOL 2005, was held 12 to 17 September 2005, in Yalta, Ukraine, in the resort “Russia,” which is in the immediate vicinity of Livadia Palace and situated in the luxurious park, Chukurlar. The conference covered many aspects of advanced optoelectronics, including application of theoretical methods and computer modeling of optoelectronic and laser systems, as well as tangent areas of optoelectronics research that are currently underway. We can say with great satisfaction that CAOL is receiving international recognition as one Ukraine’s first-rate English-speaking conferences on optoelectronics and laser engineering. It should be noted that this conference is unique in that it joins specialists in precision signal processing with optical engineers.

Participants from leading scientific organizations in 37 countries gathered in Yalta to present papers embracing mathematical, physical, and technical problems of modern laser physics, photonics, optics, and signal processing. The research topics with high representation were semiconductor nanoengineering and photonic crystals, and nonlinear optics, as well as optical measurements, wave distribution in optical systems, and precision oscillations.

It can be concluded that CAOL 2005 was met with success, and indeed the CAOL series continues. The Conference was held in Guanajuato, Mexico (2006) and is planned to be held again in Alushta, Ukraine in September, 2008. It holds great potential for showcasing ongoing investigations in those fields of photonics that will generate new optoelectronic devices for various applications. In particular, this potential lies in research related to photonic crystals and devices based on them, creation of new nanolasers and other active elements based on quantum-confined structures, and creation of ultrabroadband systems and data transmission devices, including those for application in optical computers.

Igor A. Sukhoivanov
