Paper Numbering: Proceedings of SPIE follow an e-First publication model, with papers published first online and then in print and on CD-ROM. Papers are published as they are submitted and meet publication criteria. A unique, consistent, permanent citation identifier (CID) number is assigned to each article at the time of the first publication. Utilization of CIDs allows articles to be fully citable as soon they are published online, and connects the same identifier to all online, print, and electronic versions of the publication. SPIE uses a six-digit CID article numbering system in which:

- The first four digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc.

The CID number appears on each page of the manuscript. The complete citation is used on the first page, and an abbreviated version on subsequent pages. Numbers in the index correspond to the last two digits of the six-digit CID number.

Introduction

Metamaterials, artificial subwavelength structures which involve the interaction of electromagnetic radiation, is now an established research area and gathering momentum each year. In this meeting we placed emphasis on optical (and infrared) metamaterials as evidenced by the large number of contributions on superlensing. Surface plasmons also brought a significant number of contributions with interest apparent from other neighbouring conferences such as nanophotonics. As the subject matures, we have seen more contributions to novel device applications (including waveguides and transmission lines, hole arrays and photonic crystals) backed by new theory.

This conference is the third in the series of metamaterials, the first at the SPIE Europe meeting in Warsaw 2005, followed by the 2007 meeting in Prague. It is hoped that the tradition of an eastern and western European venue will continue.

The chairs of the meeting would like to thank all contributors to the conference, the SPIE team, and the programme committee, many of whom were drawn from METAMORPHOSE Network of Excellence.
