SESSION 11 PHASE TRANSITION AND HETEROSTRUCTURES

10105 18 Interfacial coupling and polarization of perovskite ABO₃ heterostructures (Invited Paper) [10105-80]

10105 19 Monolithic integration of metal-ferroelectric-semiconductor heterostructure using atomic layer deposition [10105-31]

SESSION 12 OXIDES FOR THE IR: PLASMONICS AND INTERSUBBAND TRANSITIONS II

10105 1B Zinc nitride thin films: basic properties and applications (Invited Paper) [10105-33]

SESSION 13 OXIDE-BASED PHOTOVOLTAICS I

10105 1F Effect of ZnO surface defects on efficiency and stability of ZnO-based perovskite solar cells (Invited Paper) [10105-37]

SESSION 14 OXIDE-BASED PHOTOVOLTAICS II

10105 1K ZnO for solar cell and thermoelectric applications (Invited Paper) [10105-42]

10105 1L Ultra-wide broadband dielectric mirrors for solar collector applications [10105-41]

SESSION 15 OXIDE-BASED PHOTODETECTORS

10105 1M Vertical solar blind Schottky photodiode based on homoepitaxial Ga₂O₃ thin film (Invited Paper) [10105-43]

10105 1N MgZnO grown by molecular beam epitaxy on N-Type β-Ga₂O₃ for UV Schottky barrier solar-blind photodetectors [10105-44]

SESSION 16 GA₂O₃-BASED DEVICES AND MATERIALS

10105 1R A study into the impact of sapphire substrate orientation on the properties of nominally-undoped β-Ga₂O₃ thin films grown by pulsed laser deposition [10105-48]

SESSION 17 SUPERCONDUCTORS IV

10105 1S Microwave nonlinear response of oxide superconducting films in the Berezinskii-Kosterlitz-Thouless state (Invited Paper) [10105-71]

10105 1T Spin-orbit coupled superconductivity at the interface of LaAlO₃/SrTiO₃ (Invited Paper) [10105-73]
POSTER SESSION

10105 1U Multiphonon contribution to the polaron formation in cuprates with strong electron correlations and strong electron-phonon interaction (Invited Paper) [10105-76]

10105 1V Why only hole conductors can be superconductors (Invited Paper) [10105-82]

10105 1W Oscillation valence electron model of superconducting cuprates [10105-52]

10105 1Y UV radiation and CH₄ gas detection with a single ZnO:Pd nanowire [10105-55]

10105 1Z Solution-deposited Al₂O₃ dielectric towards fully-patterned thin film transistors on shape memory polymer [10105-56]

10105 20 Ultrafast optical reversible double Feynman logic gate using electro-optic effect in lithium-niobate based Mach Zehnder interferometers [10105-57]

10105 21 Improvement in grain size and crystallinity of sputtered ZnO thin film with optimized annealing ambient [10105-58]

10105 23 Cycling performance of Mn₂O₃ porous nanocubes and hollow spheres for lithium-ion batteries [10105-60]

10105 24 Enhancement of photoluminescence in RF sputtered ZnMgO thin films by optimizing annealing temperature [10105-61]

10105 26 Electrodeposition of NiO films from various solvent electrolytic solutions for dye sensitized solar cell application [10105-63]

10105 29 Mesoporous TiO₂/graphene composite films for the photocatalytic degradation of eco-persistent pollutants [10105-66]

10105 2A H₂ gas sensing properties of a ZnO/CuO and ZnO/CuO/Cu₂O heterostructures [10105-67]

10105 2C Imprinting of nanoporosity in lithium-doped nickel oxide through the use of sacrificial zinc oxide nanotemplates [10105-70]
Authors

Numbers in the index correspond to the last two digits of the six-digit citation identifier (CID) article numbering system used in Proceedings of SPIE. The first four digits reflect the volume number. Base 36 numbering is employed for the last two digits and indicates the order of articles within the volume. Numbers start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B...0Z, followed by 10-1Z, 20-2Z, etc.

Bruno Viana, Ecole Nationale Supérieure de Chimie de Paris (France)

17 Superconductors IV
Ivan Bozovic, Brookhaven National Laboratory (United States)
Sergei G. Ovchinnikov, Kirensky Institute of Physics (United States)
Introduction

2017 was the eighth anniversary of the "Oxide Based Materials and Devices" conference at Photonics West. With 4 days of oral presentations, plus a poster session, the conference has become an established fixture of the "Opto Symposium" and a forum for an ever more diverse exchange on the breathtaking potentialities offered by oxide materials. This year we had particular emphasis on cuprate superconductors, Ga$_2$O$_3$- and ZnO-based materials. Amongst the many applications, recurring themes were solar cells, transparent electronics, sensors and quantum cascade lasers. The organizers are now looking forward to opening the next chapter on oxide-based photonics with you in San Francisco in 2018.
