Contents

Part One

CURRICULUM DEVELOPMENT IN OPTICS AND PHOTONICS EDUCATION I

10452 04 Demonstration of theoretical and experimental simulations in fiber optics course [10452-10]

10452 05 Solar cell and photonics outreach for middle school students and teachers [10452-29]

10452 06 The Master’s program in Advanced Optical Technologies: an interdisciplinary, international and individual approach [10452-37]

10452 07 Cathedral outreach: student-led workshops for school curriculum enhancement in non-traditional environments [10452-44]

NEW PEDAGOGICAL METHODS, TOOLS AND MODELS IN OPTICAL EDUCATION I

10452 08 Near-field diffraction from amplitude diffraction gratings: theory, simulation and results [10452-7]

10452 09 Why do I need to know this? Optics/photonics problem-based learning in the math classroom [10452-9]

10452 0A Towards the computer visualization of electrodynamics education for undergraduates major in optics [10452-17]

10452 0B New approaches in teaching laser engineering classes: modeling and building up a laser [10452-21]

EDUCATION AND TRAINING FOR MULTIDISCIPLINARY EDUCATION I

10452 0D Optical projects in the Clinic program at Harvey Mudd College [10452-39]

10452 0E Re-energizing enquiry among our young professionals [10452-43]

10452 0F Hierarchy curriculum for practical skills training in optics and photonics [10452-126]
Using polarization maintaining fibers for the purpose of a polarization multiplex

Solar powered rotorcraft: a multidisciplinary engineering challenge for undergraduate students (Invited Paper)

Active learning in optics for girls (Invited Paper)

Chinese national optical education small private online course system

Enriching contents of optical courses with cutting-edge knowledge in nanophotonics

The Master level optics laboratory at the Institute of Optics

Teaching practice and effect of the curriculum design and simulation courses under the support of professional optical software

Discussion and group work design in O2O teaching of applied optics: questions, strategies and extending

Study and practice of flipped classroom in optoelectronic technology curriculum

Modular and extensible lesson on fiber optics for youths

A whole-process progressive training mode to foster optoelectronic students' innovative practical ability

Student-centered and ability training-oriented curriculum reform in teaching Microcontroller Principles and Interface Techniques

Teaching the concept of convolution and correlation using Fourier transform

An optoelectric professional's training model based on Unity of Knowing and Doing theory

Why not serve an educational buffet for students? Blended learning in optics experimental education

The application of micro-lesson in optics teaching
Visualization of polarization state and its application in optics classroom teaching

Exploration and practice in-class practice teaching mode

LABORATORIES FOR OPTICS EDUCATION II

Consequences of repeated discovery and benign neglect of non-interaction of waves (NIW) [10452-36]

Teaching stellar interferometry with polymer optical fibers [10452-61]

Optics simulations: a Python workshop [10452-95]

Observations and theoretical evaluations of color changes of traveling light beams caused by optical rotation phenomena in sugared water and their applications for educational purposes [10452-67]

Photonics in nature: Yellowstone National Park in IR [10452-73]

Demonstration and implications when 50% beam combiners can behave as 0% or 100% reflector/transmitter inside some interferometers [10452-83]

Interactive virtual optical laboratories [10452-93]

Optics education in an optometric setting [10452-104]

Optical engineering: understanding optical system by experiments [10452-109]

The exploration and practice of the integrative and continuous optoelectronic practical teaching system [10452-117]

An improved Michelson interferometer: smoothing out the rough spots for a more effective teaching tool [10452-147]

Optical circulator analysis and optimization: a mini-project for physical optics [10452-148]

Introduction of optical tweezers in advanced physics laboratory [10452-153]

EDUCATION AND TRAINING FOR MULTIDISCIPLINARY EDUCATION II

Light-based science and technologies and human civilization: an optical course for general education [10452-77]

Optoelectronic lessons as an interdisciplinary lecture [10452-111]

Ball game watching theory in the teaching site [10452-118]

10452 3D  To make a further explanation on some questions about optical imaging using a light field camera [10452-265]

10452 3E  Teaching practice of the course of Laser Principle and Application based on PBL mode [10452-266]

10452 3F  An optoelectronic detecting based environment perception experiment for primer students using multiple-layer laser scanner [10452-268]

TEACHING OF PHOTONICS FOR HIGH SCHOOL STUDENTS

10452 3H  Research summer camp in photonics [10452-59]

10452 3I  Teaching basic concepts based on diffraction grating to basic primary diffraction education students [10452-60]

10452 3K  Middle and high school teachers' implementation reflections of photonics and optics curriculum in a qualitative study [10452-258]

KEYNOTE SESSION II

10452 3L  Bringing optics to Fab Labs in Europe (Keynote Paper) [10452-279]

POSTER SESSION

10452 3Q  LCoS-SLM technology based on Digital Electro-optics Platform and using in dynamic optics for application development [10452-3]

10452 3R  Simulation and visualization of fundamental optics phenomenon by LabVIEW [10452-6]

10452 3S  Exploration of offering photoelectric experimental general elective courses for college students of science and technology [10452-11]

10452 3V  Photoelectric professional students in common universities cultivate way to explore under the background of professional certification [10452-16]

10452 3W  Study on diversified cultivation orientation and pattern of optoelectronic major undergraduates [10452-22]

10452 3X  The exploration and practice of integrated innovation teaching in the Applied Optics course [10452-24]

10452 3Y  Teaching autonomy: turning the teaching evaluation of the Applied Optics course from impart knowledge to the new intelligent thinking [10452-25]

10452 40  To promote the engineering innovative abilities of undergraduates by taking projects as the guidance and competitions as the promotion [10452-32]
Remote-controlled optics experiment for supporting senior high school and undergraduate teaching [10452-38]

Exploration and practice of the cultivation of optoelectronic innovative talents based on the Students Innovation Training Program [10452-45]

Investigation, study and practice of optoelectronic MOOCs [10452-46]

Exploration and practice for engineering innovative talents training based on project-driven [10452-51]

Reform and practice for photoelectric specialty experimental teaching based on virtual simulation experiment platform [10452-52]

The application of network teaching in applied optics teaching [10452-55]

The optical design of solar spectrograph [10452-56]

Student project of optical system analysis API-library development [10452-57]

Adaption of the Michelson interferometer for a better understanding of the temporal coherence in lasers [10452-62]

PBL approach for undergraduate studies in light engineering [10452-63]

Experimental instruction in photonics for high school students: approaches to managing problems faced [10452-66]

An exploration of the biomedical optics course construction of undergraduate biomedical engineering program in medical colleges [10452-68]

Design and implementation of a modular interactive labyrinth targeted for use in optical education [10452-76]

Effect of finite beam size on the spatial and spectral response of a Fabry-Perot interferometer [10452-78]

Practical research on the teaching of Optical Design [10452-81]

Cognition and thinking on Applied Optics course’s reformation and innovation [10452-84]

Demonstration of wave optic in physics education [10452-88]

Exploration on the training mode of application-oriented talents majoring in optoelectronic information [10452-89]

FDTD method and models in optical education [10452-94]

Study on the depolarization of CCl₄ Raman spectrum by the parameter of polarizer and analyzer [10452-96]
10452 4L  Exploration of multidimensional interactive classroom teaching for CCD principle and application course [10452-98]

10452 4M  Reform of experimental teaching based on quality cultivation [10452-100]

10452 4N  The application and improvement of Fourier transform spectrometer experiment [10452-103]

10452 4O  Active learning in camera calibration through vision measurement application [10452-105]

10452 4P  A modified rotating liquid optics method to measure the gravity acceleration [10452-106]

10452 4Q  Study of the undergraduate student's innovation and entrepreneurship training strategy [10452-107]

10452 4R  Curriculum system for experimental teaching in optoelectronic information [10452-110]

10452 4T  Design and practice of a novel experiment teaching systems based on the optoelectric information chain [10452-113]

10452 4U  Capacity-oriented curriculum system of optoelectronics in the context of large category cultivation [10452-114]

10452 4V  Project-oriented teaching model about specialized courses in the information age [10452-116]

10452 4W  Study on the joint training mode of optical engineering master [10452-122]

10452 4X  The practice of problem-based investigative teaching reform in semiconductor physics course [10452-123]

10452 4Y  Experimental teaching reforms of optical fiber communication based on general education [10452-124]

10452 4Z  Recent progress in holographic display technology [10452-125]

10452 50  Improvement of the experimental content in Laser Principle and its Application [10452-138]

10452 51  Pure study and experimental application of laser measurement for students in independent colleges [10452-139]

10452 52  Exploration on practice teaching reform of Photoelectric Image Processing course under applied transformation [10452-140]

10452 54  Practice and thinking on examination way reform of optoelectronic detection technology course [10452-143]

10452 55  Effective approach to spectroscopy and spectral analysis techniques using Matlab [10452-146]

10452 56  MOOC construction and application in professional degree postgraduate education: taking Introduction to Engineering Optics as an example [10452-149]

### Authors

Numbers in the index correspond to the last two digits of the seven-digit citation identifier (CID) article numbering system used in Proceedings of SPIE. The first five digits reflect the volume number. Base 36 numbering is employed for the last two digits and indicates the order of articles within the volume. Numbers start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B...0Z, followed by 10-1Z, 20-2Z, etc.

Laboratories for Optics Education IV

Xiaodong Zheng, Zhejiang University (China)

ETOP Keynote Session II

Xu Liu, Zhejiang University (China)

ETOP Keynote Session III

Xu Liu, Zhejiang University (China)
Introduction

The 14th Conference on Education and Training in Optics and Photonics: ETOP 2017 was held at Zhejiang University, Hangzhou, China, on 29–31 May 2017. The conference gathered 286 educators in the areas of optics and photonics from 28 countries and regions.

This was the first ETOP conference held in China after its founding in 1988, and the largest ETOP conference by the number of participants and presentations.

ETOP 2017 brought together leading optics and photonics educators from all levels and orientations to discuss, demonstrate, and learn about new developments and approaches of teaching in their fields. Through presentations, panel discussions, workshops and exhibits, it was the intent of this conference to inform professors, students, teachers, and professional trainers on how to teach optics and photonics for the future.

The teaching of optics and photonics, critical fields at the core of today’s worldwide technological infrastructure, must continually get evaluated and improved in order to meet the growing demands of research, science, and industry.

We had a very successful ETOP meeting. The number of submissions (both of published papers and of abstracts for the program) have set the new record in the history of the conference.

Xu Liu
Xi-Cheng Zhang
