xv Introduction

GUIDED WAVE FOR COMPOSITE INSPECTION

9805 02 Characterization of propagation and scattering via wavefield imaging for improved in situ imaging of damage in composites [9805-1]
9805 03 Numerical and experimental studies of delamination detection in short fiber reinforced composites using Lamb waves [9805-2]
9805 04 Model assisted probability of detection for a guided waves based SHM technique [9805-3]
9805 05 Phased array beamforming and imaging in composite laminates using guided waves [9805-4]

BRIDGE MONITORING

9805 07 Damage detection based on mode shapes of a girder bridge constructed from responses of a moving vehicle under impact excitation [9805-6]
9805 08 Structural health monitoring system of Ironton-Russell bridge during substructure construction [9805-7]
9805 0A Numerical simulation of wind effects on the temperature analysis of bridges [9805-9]

BUILDING AND BRIDGE MONITORING

9805 0B Sparse generalized pencil of function and its application to system identification and structural health monitoring [9805-10]
9805 0C Uncertainty analysis of practical structural health monitoring systems currently employed for tall buildings consisting of small number of sensors [9805-11]
9805 0D Bayesian model updating using incomplete modal data without mode matching [9805-12]
9805 0E Gap between technically accurate information and socially appropriate information for structural health monitoring system installed into tall buildings [9805-13]
Estimation of seismic response of buildings with a few accelerometers without input data [9805-14]

ACOUSTIC SOURCE LOCALIZATION

Acoustic emission source localization based on distance domain signal representation [9805-17]
Acoustic source localization in an anisotropic plate without knowing its material properties: a new approach [9805-18]

NONLINEAR GUIDED WAVE BASED TECHNIQUES

Amplitude-dependent contraction/elongation of nonlinear Lamb waves [9805-19]
Analytical modeling of contact acoustic nonlinearity of guided waves and its application to evaluating severity of fatigue damage [9805-20]
Progressive damage state evolution and quantification in composites [9805-21]

MODELING WAVE PROPAGATION AND CRACK PROPAGATION

Modeling of fatigue crack induced nonlinear ultrasonics using a highly parallelized explicit local interaction simulation approach [9805-23]
Defect induced guided waves mode conversion [9805-24]
Crack propagation modeling using Peridynamic theory [9805-25]
Simulation of guided wave propagation near numerical Brillouin zones [9805-26]

GUIDED WAVES FOR SHM

Finite element modeling of guided wave scattering at delaminations in composite panels [9805-28]
Helical guided waves in liquid-filled cylindrical shells subjected to static pressurization stress [9805-29]
A hybrid non-reflective boundary technique for efficient simulation of guided waves using local interaction simulation approach [9805-30]
Detecting delaminations and disbondings on full-scale wing composite panel by guided waves based SHM system [9805-31]
Higher and sub-harmonic Lamb wave mode generation due to debond-induced contact nonlinearity [9805-35]

Consolidating guided wave simulations and experimental data: a dictionary learning approach [9805-106]

Pipes and Tubes

In-situ measurement of the height of condensed water in steam pipes with dynamic flow [9805-36]

Advanced signal processing technique for damage detection in steel tubes [9805-37]

Nonlinear Techniques

Assessment of the aging level of rejuvenated hot mixed asphalt concrete pavements [9805-38]

Wideband excitation in nonlinear vibro-acoustic modulation for damage detection [9805-39]

Damage visualization using synchronized noncontact laser ultrasonic scanning [9805-40]

A semi-nonlocal numerical approach for modeling of temperature-dependent crack-wave interaction [9805-41]

Periodic Structure and Metamaterial II

Anomalous refraction of guided waves via embedded acoustic metasurfaces [9805-53]

Mechanically robust microfluidics and bulk wave acoustics to sort microparticles [9805-49]

Acoustic Emission Based SHM

Identifying fatigue crack geometric features from acoustic emission signals [9805-56]

Embedded and conventional ultrasonic sensors for monitoring acoustic emission during thermal fatigue [9805-57]

Signal Processing and Damage Detection

Probabilistic uncertainty quantification of wavelet-transform-based structural health monitoring features [9805-60]

A novel defect detection technique based on automatic detection of potential background [9805-63]
### PRACTICAL CONSIDERATIONS OF SHM

### NOVEL INSTRUMENTS AND INNOVATIVE SENSING

| 9805 25 | Effects of asphalt rejuvenator on thermal and mechanical properties on oxidized hot mixed asphalt pavements [9805-78] |
Reflective SOA fiber cavity adaptive laser source for measuring dynamic strains [9805-79]

Ultrasonic imaging using wave structure-based weights and global matched coefficients [9805-80]

Performing modal analysis for multi-metric measurements: a discussion [9805-81]

Underwater camera with depth measurement [9805-82]

Photonic crystal fiber based chloride chemical sensors for corrosion monitoring [9805-84]

Nonlinear phased array imaging [9805-85]

Piezoelectric-based smart sensing system for I-beam structural health monitoring [9805-83]

NDE AND RAPID GLOBAL ASSESSMENT OF HIGHWAY BRIDGES

Low-cost, quantitative assessment of highway bridges through the use of unmanned aerial vehicles [9805-86]

Comparison of air-coupled GPR data analysis results determined by multiple analysts [9805-90]

Similarities and differences in bare concrete deck deterioration curves from multi NDE technology surveys [9805-91]

POSTER SESSION

Long-term monitoring of structures through point cloud analysis [9805-94]

Multi-field coupled sensing network for health monitoring of composite bolted joint [9805-95]

The application of data mining and cloud computing techniques in data-driven models for structural health monitoring [9805-96]

Fabrication and characterization of nanostructured Mg-doped CdS/AAO nanoporous membrane for sensing applications [9805-97]

Rotor damage detection by using piezoelectric impedance [9805-98]

Optimized sensor location for estimating story-drift angle for tall buildings subject to earthquakes [9805-99]

The random field model of the spatial distribution of heavy vehicle loads on long-span bridges [9805-100]

Wave propagation in metamaterial lattice sandwich plates [9805-101]

Authors

Numbers in the index correspond to the last two digits of the six-digit citation identifier (CID) article numbering system used in Proceedings of SPIE. The first four digits reflect the volume number. Base 36 numbering is employed for the last two digits and indicates the order of articles within the volume. Numbers start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B...0Z, followed by 10-1Z, 20-2Z, etc.

George Zentai, Varian Medical Systems, Inc. (United States)

Session Chairs

1 Guided Wave for Composite Inspection
   Tribikram Kundu, The University of Arizona (United States)
   Wolfgang Grill, ASI Analog Speed Instruments GmbH (Germany)

2 Bridge Monitoring
   Henrique L. Reis, University of Illinois at Urbana-Champaign
   (United States)

3 Building and Bridge Monitoring
   Zhongqing Su, The Hong Kong Polytechnic University
   (Hong Kong, China)
   Lingyu Yu, University of South Carolina (United States)

4 Acoustic Source Localization
   Lingyu Yu, University of South Carolina (United States)
   Paul Fromme, University College London (United Kingdom)

5 Nonlinear Guided Wave Based Techniques
   Paul Fromme, University College London (United Kingdom)
   Christopher Niezrecki, University of Massachusetts Lowell
   (United States)

6 Modeling Wave Propagation and Crack Propagation
   Tadeusz Uhl, AGH University of Science and Technology (Poland)
   Sourav Banerjee, University of South Carolina (United States)
7  Guided Waves for SHM
   Wieslaw M. Ostachowicz, The Szewalski Institute of Fluid-Flow Machinery (Poland)
   Niranjan Desai, Purdue University (United States)

8  Pipes and Tubes
   Hoon Sohn, KAIST (Korea, Republic of)
   Andrei N. Zagrai, New Mexico Institute of Mining and Technology (United States)

9  Nonlinear Techniques
   Victor Giurgiutiu, University of South Carolina (United States)
   Hoon Sohn, KAIST (Korea, Republic of)

10 Periodic Structure and Metamaterial I
    Guoliang Huang, University of Missouri School of Medicine (United States)
    Jinkyu Yang, University of Washington (United States)

11 Periodic Structure and Metamaterial II
    Jinkyu Yang, University of Washington (United States)
    Guoliang Huang, University of Missouri School of Medicine (United States)

12A Acoustic Emission Based SHM
    Anthony J. Croxford, University of Bristol (United Kingdom)

12B Composite Monitoring
    Wieslaw M. Ostachowicz, The Szewalski Institute of Fluid-Flow Machinery (Poland)
    S. Gopalakrishnan, Indian Institute of Science (India)

13A Signal Processing and Damage Detection
    Andrei N. Zagrai, New Mexico Institute of Mining and Technology (United States)
    Harsh K. Baid, AlphaSTAR Corp. (United States)

13B Practical Considerations of SHM
    Zhenhua Tian, University of South Carolina (United States)

14A Innovative Sensing and Novel Instruments
    Wolfgang Grill, ASI Analog Speed Instruments GmbH (Germany)
    Xiaoning Jiang, North Carolina State University (United States)
14B Use of Sensor Technologies for Condition Assessment of Highway Infrastructure
David D. Mascareñas, Los Alamos National Laboratories
(United States)

15A Novel Instruments and Innovative Sensing
Henrique L. Reis, University of Illinois at Urbana-Champaign
(United States)

15B NDE and Rapid Global Assessment of Highway Bridges
Nicole Martino, Roger Williams University (United States)
Introduction

In 2001, the SPIE conference (#4335) on Health Monitoring of Structural and Biological Systems brought engineers, materials scientists, medical doctors, and biologists together to exchange their ideas on this important topic. After having a positive experience at that conference, annual conferences were organized on the same topic. The proceedings of conference 9805 contains papers presented at the 2016 conference. Papers presented in the earlier conferences can be found in the following proceedings volumes: #4335 (2001), #4702 (2002), #5047 (2003), #5394 (2004), #5768 (2005), #6177 (2006), #6532 (2007), #6935 (2008), #7295 (2009), #7650 (2010), #7984 (2011), #8348 (2012), #8695 (2013), #9064 (2014) and #9438 (2015).

This conference aims to recognize that nondestructive sensing, sensor array design, signal acquisition and transmission, signal processing, energy harvesting etc. are integral parts of health monitoring for both structural and biological systems. I believe that biological and physical science communities are learning from one another by coming to this conference and exchanging ideas. Some of the recent advances in the science and technology of health monitoring techniques that go beyond the traditional nondestructive testing for internal flaw detection are presented in these proceedings. New diagnosis, prognosis and rehabilitation techniques applied to engineering structures made of metal, concrete, and composites, as well as biological systems are presented. The papers published here cover a wide range of technologies. It is hoped that this conference will stimulate further interactions between physical and life science communities resulting in newer development of more innovative techniques for health monitoring applications.

I am thankful to the program committee members, authors, session chairs, and the SPIE staff for putting together this excellent conference.

Tribikram Kundu
