**Volume 9995**

Proceedings of SPIE 0277-786X, V. 9995

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

Optics and Photonics for Counterterrorism, Crime Fighting, and Defence XII, edited by  
D. Burgess, G. Owen, H. Bouma, F. Carlisle-Davies, R. J. Stokes, Y. Yitzhaky, Proc. of SPIE  
Vol. 9995, 999501 · © 2016 SPIE · CCC code: 0277-786X/16/\$18 · doi: 10.1117/12.2263767

Proc. of SPIE Vol. 9995 999501-1

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at [SPIDigitalLibrary.org](http://SPIDigitalLibrary.org).

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

---

**Paper Numbering:** *Proceedings of SPIE* follow an e-First publication model. A unique citation identifier (CID) number is assigned to each article at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a six-digit CID article numbering system structured as follows:

- The first four digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

## DETECTION AND IDENTIFICATION: FALSEHOOD AND THREATS I

---

- 9995 01 **Holographic interferometry for security and forensic applications [9995-1]**
- 9995 02 **Optical benchmarking of security document readers for automated border control [9995-2]**
- 9995 03 **Optical multiple-image authentication based on cascaded phase filtering structure [9995-3]**
- 9995 04 **The first large area, high X-ray energy phase contrast prototype for enhanced detection of threat object in baggage screening [9995-4]**
- 9995 05 **New capability for hazardous materials ID within sealed containers using a portable spatially offset Raman spectroscopy (SORS) device [9995-5]**
- 9995 06 **A novel biometric X-ray backscatter inspection of dangerous materials based on a lobster-eye objective [9995-6]**
- 9995 07 **Stand-off detection of aerosols using mid-infrared backscattering Fourier transform spectroscopy (Runner-Up Best Student Paper Award) [9995-7]**
- 9995 08 **Multispectral imaging system based on laser-induced fluorescence for security applications [9995-8]**
- 9995 09 **Standoff laser-induced fluorescence of suspensions from different bacterial strains [9995-9]**
- 9995 0A **Biological material detection identification and monitoring: combining point and standoff sensors technologies [9995-10]**
- 9995 0C **The performance of spatially offset Raman spectroscopy for liquid explosive detection [9995-12]**

---

## DETECTION AND IDENTIFICATION: FALSEHOOD AND THREATS II

---

- 9995 0D **Fast sparse Raman spectral unmixing for chemical fingerprinting and quantification [9995-13]**
- 9995 0F **Laser desorption of explosives traces at ambient conditions [9995-16]**

9995 OG **How can we distinguish between simulants and hazardous substances under real conditions?** [9995-17]

---

#### DETECTION, TRACKING AND RE-IDENTIFICATION

---

9995 OH **The effects of camera jitter for background subtraction algorithms on fused infrared-visible video streams** [9995-18]

9995 OI **Large scale track analysis for wide area motion imagery surveillance** [9995-19]

9995 OJ **Object recognition using deep convolutional neural networks with complete transfer and partial frozen layers** [9995-20]

9995 OK **MAD for visual tracker fusion** [9995-21]

9995 OL **Deep person re-identification in aerial images (Best Student Paper Award)** [9995-22]

---

#### ANOMALY, EVENT AND BEHAVIOUR ANALYSIS

---

9995 OM **Measuring cues for stand-off deception detection based on full-body nonverbal features in body-worn cameras** [9995-23]

9995 ON **Autonomous detection of crowd anomalies in multiple-camera surveillance feeds** [9995-24]

9995 OO **Detection of infrastructure manipulation with knowledge-based video surveillance** [9995-25]

9995 OP **Long-term behavior understanding based on the expert-based combination of short-term observations in high-resolution CCTV** [9995-26]

---

#### NETWORKS OF AUTONOMOUS SENSORS

---

9995 OQ **Towards an autonomous sensor architecture for persistent area protection** [9995-27]

9995 OR **SLATE: scanning laser automatic threat extraction** [9995-28]

9995 OS **Real-time classification of vehicles by type within infrared imagery** [9995-29]

9995 OT **Radar based autonomous sensor module** [9995-30]

9995 OU **An autonomous sensor module based on a legacy CCTV camera** [9995-31]

9995 OV **Threat assessment and sensor management in a modular architecture** [9995-32]

**POSTER SESSION**

---

- 9995 0W **A support vector machine approach to the automatic identification of fluorescence spectra emitted by biological agents** [9995-33]
- 9995 0X **The image enhancement and region of interest extraction of lobster-eye X-ray dangerous material inspection system** [9995-34]

## Authors

Numbers in the index correspond to the last two digits of the six-digit citation identifier (CID) article numbering system used in Proceedings of SPIE. The first four digits reflect the volume number. Base 36 numbering is employed for the last two digits and indicates the order of articles within the volume. Numbers start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B...0Z, followed by 10-1Z, 20-2Z, etc.

# Conference Committee

## *Symposium Chair*

**David H. Titterton**, United Kingdom Defence Academy  
(United Kingdom)

## *Symposium Co-Chair*

**Ric Schleijpen**, TNO Defence, Security and Safety  
(Netherlands)

**Karin Stein**, Fraunhofer-Institut für Optronik, Systemtechnik und  
Bildauswertung (Germany)

**Stuart S. Duncan**, Leonardo-Finmeccanica (United Kingdom)

## *Conference Chairs*

**Douglas Burgess**, Burgess Consulting (United Kingdom)

**Gari Owen**, Annwyn Solutions (United Kingdom)

**Henri Bouma**, TNO (Netherlands)

**Felicity Carlisle-Davies**, University of Strathclyde (United Kingdom)

**Robert James Stokes**, Cobalt Light Systems Ltd. (United Kingdom)

**Yitzhak Yitzhaky**, Ben-Gurion University of the Negev (Israel)

## *Conference Programme Committee*

**Benedicte Bascle**, Thales Optronique S.A.S. (France)

**Stefan Becker**, Fraunhofer-Institut für Optronik, Systemtechnik und  
Bildauswertung (Germany)

**Richard R. Boffen**, Ministry of Defence (United Kingdom)

**Deeph Chana**, Imperial College London (United Kingdom)

**David J. Clarke**, Placing Value Company, Ltd. (Thailand)

**Giovanni Cocca**, SELEX ES S.p.A. (Italy)

**Howard J. Cummins**, Her Majesty's Government Communications  
Centre (United Kingdom)

**Brian E. Foulger**, Ministry of Defence (United Kingdom)

**Gillian F. Marshall**, QinetiQ Ltd. (United Kingdom)

**David Muench**, Fraunhofer-Institut für Optronik, Systemtechnik und  
Bildauswertung (Germany)

**Niamh Nic Daeid**, University of Dundee (United Kingdom)

**Salman Rosenwaks**, Ben-Gurion University of the Negev (Israel)

**Neil C. Shand**, Defence Science and Technology Laboratory  
(United Kingdom)

**Mauro G. Varasi**, Leonardo-Finmeccanica (Italy)

**Peter W. Yuen**, Cranfield University (United Kingdom)

*Session Chairs*

- 1 Detection and Identification: Falsehood and Threats I  
**Felicity Carlyle-Davies**, The Knowledge Transfer Network Ltd.  
(United Kingdom)
- 2 Detection and Identification: Falsehood and Threats II  
**Felicity Carlyle-Davies**, The Knowledge Transfer Network Ltd.  
(United Kingdom)
- 3 Detection, Tracking and Re-identification  
**Henri Bouma**, TNO (Netherlands)
- 4 Anomaly, Event and Behaviour Analysis  
**Yitzhak Yitzhaky**, Ben-Gurion University of the Negev (Israel)
- 5 Networks of Autonomous Sensors  
**Douglas Burgess**, Burgess Consulting (United Kingdom)  
**Yitzhak Yitzhaky**, Ben-Gurion University of the Negev (Israel)

## Introduction

The conference was arranged around two themes: the detection and identification of dangerous, hidden and suspicious materials, weapons, contraband and counterfeits; and the identification in CCTV and thermal imagery of suspicious activity— vehicles, people and their actions and objects associated with them. An increasing use of unmanned aerial vehicles (UAVs) became apparent during the conference. These are attractive in being able to carry sensors to inspect suspicious objects or activity, but so far their look-down imagery is less amenable to automatic image processing since there is so little top-down data for algorithm training. A second observation was the number of programmes that were collaborative across nations, funded for example by European Union FP7.

The first session began with three presentations on techniques for strengthening anti-counterfeiting features. A United Kingdom/India paper [999501] explained techniques that would strengthen holographic features. A European Union FP7-funded paper [999502] described measurements on automatic passport readers that could lead to operator-free border crossings. The third paper, from France [999503] described how optical image authentication algorithms could help strengthen encryption. The session moved on to searching for hidden dangerous materials and objects at short range with descriptions of improved X-ray techniques for baggage scanning in [999504] from the United Kingdom, [999506] and [99950X] from China and developments of Raman sensing for chemicals and explosives hidden in containers in [999505] and [99950C], both from the United Kingdom. The conference co-chairs recommended this last presenter, Arne Schumann, be awarded the best student paper prize.

At longer ranges, other techniques come into their own. An Italian paper [999508] described a crime scene analyser that used laser induced fluorescence (LIF) to discriminate between different classes of materials. When suspect materials are in aerosol or vapour form, they can be detected and sometimes identified using mid-infrared backscatter [999507] (United Kingdom) or LIF [999509] (Germany), or point and remote sensing can be combined [99950A] (Canada). The automatic detection of fluorescence spectra from biological agents was described in poster [99950W] from Italy. Whilst outdoor sensing techniques continue to be developed, in the laboratory, a researcher from the United States has developed new components [99950B] that will improve point detector performance.

The session concluded with papers concerned with explosives detection. [99950D] from the United Kingdom covered sparse Raman un-mixing for fingerprinting and quantification, [99950E] from the United States described experiments to measure how explosives residues transferred between criminals

and things they touched. From the Russian Federation there were two papers; the first [99950F] on using laser desorption to increase the sensitivity of explosives detection, the second [99950G] on how, at THz frequencies, packaging affected the identification of dangerous materials.

The second day began with a session on detection, tracking and re-identification in imagery from airborne platforms. A German paper [99950H] described how to counter the effects of camera jitter. Netherlands' contributions followed on the subjects of tracking moving targets in airborne imagery [99950I] and of object recognition using deep convolutional neural networks [99950J]. Two German presentations described how best to handle multiple tracker algorithms with different strengths and weaknesses [99950K] and how to use deep learning to improve person re-identification from above [99950L]. The conference co-chairs recommended this last presenter be awarded the best student paper prize.

The session on detection of anomalous events and behaviour was opened by a Netherlands' presentation [99950M] on measuring clues from a person's demeanour that might indicate they were lying (or likely to be telling the truth). The same speaker described a system for image understanding [99950P] based on low-level processing components described as symbols and flexible user-definable and user-understandable combinations of these components, called sentences. A Swedish speaker [99950N] explained his work on the autonomous detection of crowd behaviour and there was a German presentation [99950O] on detecting and alerting operators to possible infrastructure manipulation.

In a concept that was new for this conference, we concluded with six papers all on one topic; a United Kingdom project called SAPIENT (Sensing for Asset Protection with Integrated Electronic Networked Technology). Attendees were given an explanation of how the autonomous sensors could be operated in a plug and play mode [99950Q], the workings of the laser scanner [99950R], the thermal sensor [99950S], the radar scanner [99950T], the legacy CCTV camera [99950U] and finally [99950V] how threat assessment and sensor management could be carried out using the SAPIENT architecture.
