Volume 11341
The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIEDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

ISSN: 0277-786X
ISSN: 1996-756X (electronic)

Paper Numbering: Proceedings of SPIE follow an e-first publication model. A unique citation identifier (CID) number is assigned to each article at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- the first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

### SPACE OPTICS, TELESCOPES, AND INSTRUMENTATION

| 11341 02 | Joint optimization of apodizer and Lyot stop for coronagraph with four-quadrant phase mask [11341-1] |
| 11341 03 | Review on on-orbit assembly of large space telescopes [11341-3] |
| 11341 04 | The influence of CCD undersampling on the encircled energy of SVOM-VT [11341-4] |
| 11341 05 | Probe radius compensation based on aspherical surface reconstruction in CMM profile measurement [11341-5] |
| 11341 06 | Structure optimization of carbon fiber reflective mirror by response surface [11341-6] |
| 11341 07 | Star sensor calibration method based on the SPGD algorithm [11341-7] |
| 11341 08 | Investigation of DOE effect on BER performance in space downlink chaotic optical communication system [11341-8] |
| 11341 09 | Subaperture stitching testing of a half meter-class convex cylindrical surface with R/3 [11341-10] |
| 11341 0A | Opto-mechanical integrated simulation technology of trussed front structure for space solar telescope [11341-12] |
| 11341 0B | Research on dynamic-angle measurement method for machine vision [11341-13] |
| 11341 0C | Deformable mirror correction technique for large aperture space camera [11341-14] |
| 11341 0D | Improved measurement of beacon light angle deviation based on a quadrant detector [11341-15] |
| 11341 0E | Optical design of Time Domain Observatory (TiDO) [11341-16] |
| 11341 0F | Modeling and seasonal analysis of ozone content in field automatic calibration [11341-17] |
Research on the influence of air turbulence of vertical long optical path on wave front detection [11341-18]

A new composition in-situ analyzing instrument of planetary rocks and soils [11341-20]

Design of visible light / LWIR dual-band common aperture imaging optical system [11341-23]

Optical system design of star sensor with long-life [11341-24]

Optical system design of dual-band observation and imaging [11341-25]

Ultra-wide field multispectral integrated spatial optical system design [11341-26]

Study on production process of nickel-based x-ray grazing reflector [11341-27]

Optical system design and manufacture for a 1U CubeSat [11341-28]

Research on stray light suppression of space debris detection camera [11341-29]

A method of describing space objects optical scattering characteristics based on Lambert model [11341-31]

Dynamic surface error response analysis of large-aperture space mirror [11341-32]

Design of medium solar simulator integrator [11341-33]

Research on mirror surface shape of space camera fitting based on SVD [11341-34]

Review on the research of space-based direct imaging technologies for exoplanets detection [11341-35]

The assembling of high-resolution microsatellite camera [11341-36]

Epoxy bonding of large optics’ support pads [11341-37]

Optimum design of flexible support structure for space mirror [11341-38]

Performance study of serial relay OFDM FSO system under QPSK modulation [11341-39]

Structural design of zoom system based on linear motor [11341-40]

A novel baffle based on horn tube effect [11341-41]
New space infrared system research achieving ultra-high radiation resolution [11341-42]

Laser Doppler spectra of cylinders and cones in its orbits [11341-43]

Optimization of structural parameters of sparse apertures with four rectangular sub-apertures [11341-44]

Micro-vibration test and imaging analysis during space camera thermal-optical test [11341-45]

Image clarity of membrane diffractive imaging system using total-scale Retinex [11341-46]

Research on the key technology for processing efficiency improvement of aluminum alloy mirror chemical mechanical polishing [11341-47]

Research on cam curve structure for infrared zoom optical system [11341-48]

New generation magnetorheological finishing polishing machines using robot arm [11341-50]

A calculation method of lightwave's atmospheric refractive error based on single photoelectric theodolite [11341-51]

Analysis and design of ground-based photoelectric detection system for star observation during the daytime [11341-53]

Optical system design and measurement precision analysis of pointing mirror in solar hard x-ray imager [11341-54]

The measure method for eccentricity of large aperture aspheric mirror [11341-55]

Research on maneuvering imaging theory of the super agile remote sensing satellite [11341-56]

High contrast optical system design for exoplanets imaging [11341-57]

Calibration system for space x-ray astronomical telescopes [11341-58]

Optical system of design for hyperspectral imaging applied in agriculture [11341-59]

Research on resource management mechanism of UAV [11341-60]

Research on optical remote sensing imaging performance of the low inclination orbit satellite [11341-62]

Space debris positioning technology based on observation by multiple optical platforms [11341-66]

The research on calibration technology of vacuum ultraviolet spectroradiometer [11341-67]

Numbers in the index correspond to the last two digits of the seven-digit citation identifier (CID) article numbering system used in Proceedings of SPIE. The first five digits reflect the volume number. Base 36 numbering is employed for the last two digits and indicates the order of articles within the volume. Numbers start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B...0Z, followed by 10-1Z, 20-2Z, etc.

4. Session Four
   Shuangnan Zhang, Institute of High Energy Physics, Chinese Academy of Sciences (China)

5. Session Five
   Zhong Liu, Yunnan Observatories, Chinese Academy of Sciences (China)

6. Session Six
   Wei Cui, Tsinghua University (China)
Introduction

AOPC 2019, the Annual Conference of Chinese Society of Optical Engineering [CSOE], was one of the largest academic and industrialization activities in the field of optical and optoelectronic technology in China. The Organizing Committee intended to build a potential platform together with academic exchanges, industry exhibitions, and cooperation negotiations in one. There were 11 technical conferences and 38 conference sessions, and we sincerely hope that the research and development of optoelectronic technology were promoted, and that international cooperation in industry and in the optical and optoelectronic fields were enhanced.

AOPC 2019 was sponsored by SPIE and the Chinese Society for Optical Engineering; the Optical Society of Korea [OSK], Optics and Photonics Society of Singapore [OPSS], European Optical Society [EOS], Optical Society of Japan [OSJ] were the technical co-sponsors. There were also 48 Cooperative Organizations that supported the conference.

We received over 930 total contributions from more than 15 countries, including United States, United Kingdom, Germany, France, Spain, Australia, Canada, Mexico, Brazil, Japan, the Republic of Korea, Thailand, Singapore, the Russian Federation, China, and so on. There were 554 contributions published in SPIE Proceedings.

After careful discussion, we suggested four keynote speeches which were presented by famous scientists from Germany, Australia, Japan, and China. There were 110 excellent invited talks, 45 of them are from overseas, their inclusion represented a first-class level in the field of optics and photonics technology. On behalf of the Organizing Committee of AOPC, I express the thanks to all the invited speakers and authors for their contributions and supports to the conference.

Finally, on behalf of the Chairmen and the Organizing Committee of AOPC, I would like to heartily thank for our sponsors and Cooperating Organizations for all they have done for the conference, to all of the participants and friends for their interests and efforts in helping us to make the conference success. Also, thanks to the Program Committee for their effective work and valuable advice; especially the AOPC 2019 Secretariat and SPIE for their tireless effort and outstanding services in preparing the conference and publishing the Proceedings.

We are glad that AOPC 2019 had great success! Hope to see you next year!

Guofan Jin
