Proceedings of SPIE, 1605-7422, v. 7895

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers included in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. The papers published in these proceedings reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Paper Numbering: Proceedings of SPIE follow an e-First publication model, with papers published first online and then in print and on CD-ROM. Papers are published as they are submitted and meet publication criteria. A unique, consistent, permanent citation identifier (CID) number is assigned to each article at the time of the first publication. Utilization of CIDs allows articles to be fully citable as soon they are published online, and connects the same identifier to all online, print, and electronic versions of the publication. SPIE uses a six-digit CID article numbering system in which:

- The first four digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc.

The CID number appears on each page of the manuscript. The complete citation is used on the first page, and an abbreviated version on subsequent pages. Numbers in the index correspond to the last two digits of the six-digit CID number.

Contents

vii	Conference Committee
ix	Introduction

SESSION 1 DIAGNOSTIC MICRO-/NANOSCOPY IMAGING AND ENDOSCOPY I

- 7895 02 **Translating ultraviolet autofluorescence microscopy toward clinical endomicroscopy (Invited Paper)** [7895-02]
 B. Lin, S. Urayama, R. M. G. Saroufeem, D. L. Matthews, UC Davis Medical Ctr. (United States); S. G. Demos, UC Davis Medical Ctr. (United States) and Lawrence Livermore National Lab. (United States)
- 7895 05 **Feasibility of minimally-invasive fiber-based evaluation of chondrodystrophoid canine intervertebral discs by light absorption and scattering spectroscopy** [7895-06]
 Y. Jiang, K. McKeirnan, D. Piao, K. E. Bartels, Oklahoma State Univ. (United States)

SESSION 2 DIAGNOSTIC MICRO-/NANOSCOPY IMAGING AND ENDOSCOPY II

- 7895 09 **Multiphoton imaging and quantification of tissue glycation** [7895-09]
 A. A. Ghazaryan, J.-Y. Tseng, National Taiwan Univ. (Taiwan); W. Lo, National Taiwan Univ. (Taiwan) and National Cheng Kung Univ. (Taiwan); Y.-F. Chen, V. Hovhannisyan, National Taiwan Univ. (Taiwan); S.-J. Chen, National Cheng Kung Univ. (Taiwan); H.-Y. Tan, National Taiwan Univ. (Taiwan) and Chang Gung Memorial Hospital (Taiwan); C.-Y. Dong, National Taiwan Univ. (Taiwan)

SESSION 3 STOKES SHIFT AND TIME-RESOLVED SPECTROSCOPY AND IMAGING FOR CANCER DETECTION

- 7895 0A **Detection of cervical cancer by fluorescence emission and stokes' shift spectra of blood and urine (Invited Paper)** [7895-10]
 V. Masilamani, King Saud Univ. (Saudi Arabia); T. Vijmasi, Thendrel Inc. (United States); M. AlSalhi, King Saud Univ. (Saudi Arabia); K. Govindarajan, GVN Cancer Hospital (India); A. P. VijayaRaghavan, King Saud Univ. (Saudi Arabia); R. R. Rai, Rai Memorial Cancer Hospital (India)
- 7895 0B **Time-resolved spectroscopy and near infrared imaging enhanced by receptor-targeted contrast agents for prostate cancer detection (Invited Paper)** [7895-11]
 Y. Pu, W. B. Wang, G. C. Tang, The City College of New York (United States); S. Achilefu, Washington Univ. in St. Louis (United States); R. R. Alfano, The City College of New York (United States)

- 7895 0C **Time-domain diffuse optical spectroscopy up to 1700 nm using an InGaAs/InP single-photon avalanche diode** [7895-12]
I. Bargigia, A. Tosi, A. Farina, A. Bassi, P. Taroni, A. Bahgat Shehata, Politecnico di Milano (Italy); A. Della Frera, Micro Photon Devices Srl (Italy); A. Dalla Mora, F. Zappa, Politecnico di Milano (Italy); R. Cubeddu, A. Pifferi, Politecnico di Milano (Italy) and CNR, Istituto di Fotonica e Nanotecnologie (Italy)
- 7895 0E **Use of Mueller polarimetric imaging for the staging of human colon cancer (Invited Paper)** [7895-14]
A. Pierangelo, S. Manhas, LPICM, Ecole Polytechnique, CNRS (France); A. Benali, Institut Mutualiste Montsouris (France); M. R. Antonelli, T. Novikova, LPICM, Ecole Polytechnique, CNRS (France); P. Validire, B. Gayet, Institut Mutualiste Montsouris (France); A. De Martino, LPICM, Ecole Polytechnique, CNRS (France)
- 7895 0F **Synchronous luminescence spectroscopic characterization of blood elements of normal and patients with cervical cancer** [7895-15]
K. Muthuvelu, Stanley Medical College & Hospital (India); S. Shanmugam, Anna Univ. Chennai (India); D. Koteeswaran, Meenakshi Ammal Dental College & Hospital (India); S. Srinivasan, Tuberculosis Research Ctr. (India); P. Venkatesan, P. Aruna, S. Ganesan, Anna Univ. Chennai (India)
- 7895 0G **Hyperspectral fluorescence lifetime fibre probe spectroscopy for use in the study and diagnosis of osteoarthritis and skin cancer** [7895-16]
A. Thompson, H. Manning, Imperial College London (United Kingdom); M. Brydegaard, Lund Univ. (Sweden); S. Coda, G. Kennedy, R. Patalay, Imperial College London (United Kingdom); U. Waitong-Braemming, Lund Univ. Hospital (Sweden); P. De Beule, M. Neil, Imperial College London (United Kingdom); S. Andersson-Engels, Lund Univ. (Sweden); Y. Itoh, Imperial College London (United Kingdom); N. Bendsøe, Lund Univ. Hospital (Sweden); C. Dunsby, Imperial College London (United Kingdom); K. Svanberg, Lund Univ. Hospital (Sweden); P. M. French, Imperial College London (United Kingdom)
- 7895 0H **Prostate precancer detection by Stokes Shift Spectroscopy** [7895-17]
E. Jeyasingh, Jamal Mohamed College (India); Y. Pu, W. B. Wang, C. H. Liu, R. R. Alfano, The City College of the City Univ. of New York (United States)

SESSION 4 DIFFUSE REFLECTANCE SPECTROSCOPY AND SCATTERING IMAGING

- 7895 0I **Optical biopsy of the prostate: can we TRUST (trans-rectal ultrasound-coupled spectral tomography)? (Invited Paper)** [7895-18]
D. Piao, Oklahoma State Univ. (United States); Z. Jiang, Oklahoma State Univ. (United States) and Washington Univ. in St. Louis (United States); K. E. Bartels, G. R. Holyoak, J. W. Ritchey, K. Rock, C. L. Ownby, C. F. Bunting, Oklahoma State Univ. (United States); G. Slobodov, The Univ. of Oklahoma Health Sciences Ctr. (United States)
- 7895 0J **Pancreatic tumor margin detection by oblique incidence diffuse reflectance spectroscopy** [7895-19]
A. Garcia-Urbe, Washington Univ. in St. Louis (United States) and Texas A&M Univ. (United States); C.-C. Chang, J. Zou, Texas A&M Univ. (United States); B. Banerjee, J. Kuczynski, The Univ. of Arizona Medical Ctr. (United States); L. V. Wang, Washington Univ. in St. Louis (United States)

- 7895 OK **Three dimensional localization of cancerous prostate tissue using backscattering scanning polarization imaging and independent component analysis** [7895-20]
Y. Pu, W. B. Wang, The City College of New York (United States); M. Xu, Fairfield Univ. (United States); G. C. Tang, Y. Budansky, R. R. Alfano, The City College of New York (United States)
- 7895 OM **Site-dependant redox ratio in healthy oral cavity** [7895-22]
S. Shanmugam, Anna Univ. Chennai (India); D. Koteeswaran, Meenakshi Ammal Dental College & Hospital (India); P. Aruna, S. Ganesan, Anna Univ. Chennai (India)
- 7895 ON **Near-infrared pulsed light to guide prostate biopsy** [7895-23]
J. Boutet, M. Debourdeau, A. Laidevant, L. Hervé, C. Allié, Commissariat à l'Énergie Atomique (France); D. Vray, INSA-Lyon CREATIS (France); J. Dinten, Commissariat à l'Énergie Atomique (France)

SESSION 5 NON-INVASIVE MONITORING

- 7895 OO **Developing a toolbox for analysis of warrior wound biopsies: vibrational spectroscopy (Invited Paper)** [7895-24]
N. J. Crane, Naval Medical Research Ctr. (United States); F. P. O'Brien, Walter Reed National Military Medical Ctr. (United States); J. A. Forsberg, B. K. Potter, Walter Reed National Military Medical Ctr. (United States) and Uniformed Services Univ. of Health Sciences (United States); E. A. Elster, Naval Medical Research Ctr. (United States) and Uniformed Services Univ. of Health Sciences (United States) and Walter Reed National Military Medical Ctr. (United States)
- 7895 OQ **Objective methods for achieving an early prediction of the effectiveness of regional block anesthesia using thermography and hyper-spectral imaging** [7895-26]
J. H. G. M. Klaessens, M. Landman, R. de Roode, H. J. Noordmans, Univ. Medical Ctr. Utrecht (Netherlands); R. M. Verdaasdonk, VU Univ. Medical Ctr. (Netherlands)
- 7895 OS **Inactivation of encephalomyocarditis virus and salmonella typhimurium by using a visible femtosecond laser** [7895-28]
S.-W. D. Tsen, Washington Univ. School of Medicine (United States); K. T. Tsen, Arizona State Univ. (United States)

POSTER SESSION

- 7895 OX **Miniaturized fiber raster scanner for endoscopy** [7895-32]
D. R. Rivera, D. Kobat, C. Xu, Cornell Univ. (United States)
- 7895 OY **Dynamics of hybrid amoeba proteus containing zoochlorellae studied using fluorescence spectroscopy** [7895-33]
C.-H. Liu, B. A. Fong, The City College of New York, CUNY (United States); S. A. Alfano, Jr., The City College of New York, CUNY (United States) and Union College (United States); I. Rakhlin, W. B. Wang, X. H. Ni, Y. L. Yang, F. Zhou, R. C. Zuzolo, R. R. Alfano, The City College of New York, CUNY (United States)

Author Index

Conference Committee

Symposium Chairs

James G. Fujimoto, Massachusetts Institute of Technology (United States)
R. Rox Anderson, Wellman Center for Photomedicine, Massachusetts General Hospital (United States) and Harvard School of Medicine (United States)

Program Track Chairs

Anita Mahadevan-Jansen, Vanderbilt University (United States)
Tuan Vo-Dinh, Duke University (United States)

Conference Chair

Robert R. Alfano, Institute for Ultrafast Spectroscopy and Lasers (United States)

Conference Cochair

Stavros G. Demos, Lawrence Livermore National Laboratory (United States)

Program Committee

Stefan Andersson-Engels, Lund University (Sweden)
Christopher H. Contag, Stanford University School of Medicine (United States)
Jason M. Eichenholz, Ocean Optics, Inc. (United States)
Amir H. Gandjbakhche, National Institutes of Health (United States)
Israel Gannot, Tel Aviv University (Israel)
Urs Utzinger, The University of Arizona (United States)
Wubao Wang, The City College of New York (United States)
Siavash Yazdanfar, GE Global Research (United States)
Kestutis Sutkus, The City College of New York (United States)

Session Chairs

- 1 **Diagnostic Micro-/Nanoscopy Imaging and Endoscopy I**
Stavros G. Demos, Lawrence Livermore National Laboratory (United States)

- 2 Diagnostic Micro-/Nanoscopy Imaging and Endoscopy II
Stavros G. Demos, Lawrence Livermore National Laboratory (United States)
- 3 Stokes Shift and Time-resolved Spectroscopy and Imaging for Cancer Detection
Wubao Wang, The City College of New York (United States)
- 4 Diffuse Reflectance Spectroscopy and Scattering Imaging
Nicole J. Crane, Naval Medical Research Center (United States)
- 5 Non-invasive Monitoring
Vadivel Masilamani, King Saud University (Saudi Arabia)
- 6 Insight to Feld's Diagnostic Spectroscopy and Biomedical Imaging
Yang Pu, The City College of New York (United States)

Introduction

The symposium "Optical Biopsy IX", part of the SPIE Photonics West BIOS conference, was held on January 24-26, 2011 in San Francisco. Scientists from around the world participated in the symposium, where many presented their recent work in this field, while others attended the sessions and contributed with their insightful questions and suggestions after each talk. The quality of the invited presentations in the regular sessions was very high, and the sessions were well attended. The symposium consisted of six oral sessions and one poster session, for a total of 35 oral presentations and four poster presentations. As the recognition and acceptance of Optical Biopsy techniques increases by the medical community as a result of transfer of basic research into clinically relevant experimental conditions, it is evident that the medical devices manufacturers are closely attending. The promise of diagnosis in real-time with Optical Biopsy methods is no longer just a possibility, but a fact well documented with the results of multiple studies.

The past year was marked with the passing of two of the pioneers of this field: Professor Michael Feld and Professor Britton Chance. Their contributions have been tremendous in this field. Both of them have served as Committee members and/or Organizers of this symposium. Due to the earlier passing of Prof. Feld, we were able to organize a special session devoted to his memory. Coworkers and former students of Prof. Feld were invited to share their experiences and achievements working with him. This session provided not only a review of his achievements, but also insight in to the way Prof. Feld was engaging his students to work on specific questions or problems, and bring those efforts to a successful completion. It is currently our intention to organize a similar session next year in memory of Prof. Britton Chance.

Among the 35 oral presentations, there was a keynote presentation and six invited talks in the regular sessions, and eight presentations in the session in memory of Professor Michael Feld. The keynote presentation was devoted to the field of microscopy beyond the diffraction limit, and was presented by one of the leaders in the field, Dr. Stefan W. Hell. The papers presented encompassed several different spectral and imaging technologies, extending from the macro- to the micro-scale; using fluorescence, light scattering and vibrational spectroscopies, and biophotonic approaches to detect disease, the functional state of the tissue, and control viral activity. The presentations highlighted the potential of Optical Biopsy techniques to offer solutions in many different areas of clinical interest, from warrior wound assessment in the field, to in-vivo diagnosis in the operating room and continuous monitoring during recovery. A number of presentations on Stokes Shift Spectroscopy for cancer diagnosis have shown

potential not only by in-vivo examination of specimens, but also using urine and blood samples.

For one more year, a large percentage of the attendees were from the industrial community or researchers with joint academic-industrial interests seeking for the appropriate toolset to develop the next generation of medical devices. The maturing of order technologies towards translation to the industry and clinical practice is evident. At the same time, basic research remains innovative and continuously improves existing methods, while new methods with potential emerge. Imaging of tissue at the microscopy level in-vivo capturing cellular morphology and organization in a manner similar to that provided by the current gold standard pathology, is clearly doable using various methods. What remains to be decided is what is the most suitable technology for addressing each particular clinical problem. A number of talks focused on the use of spectroscopy to obtain information in real-time, including cancer detection, skin morphochemistry, and response to an external stimulus. We expect in the next conference to see more papers dealing with in-vivo applications of the Optical Biopsy technologies and for non-cancer-related applications.

We wish to thank Dr. Rob Randleman of Ocean Optics and Arkia Hiruma from Hamamatsu for support, and the session chairs and SPIE staff for their help in making this a successful conference.
