Proceedings of SPIE, 0277-786X, v. 8128

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers included in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. The papers published in these proceedings reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Paper Numbering: Proceedings of SPIE follow an e-First publication model, with papers published first online and then in print and on CD-ROM. Papers are published as they are submitted and meet publication criteria. A unique, consistent, permanent citation identifier (CID) number is assigned to each article at the time of the first publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online, print, and electronic versions of the publication. SPIE uses a six-digit CID article numbering system in which:

- The first four digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc.

The CID number appears on each page of the manuscript. The complete citation is used on the first page, and an abbreviated version on subsequent pages. Numbers in the index correspond to the last two digits of the six-digit CID number.

Introduction

The Current Developments in Lens Design and Optical Engineering conference again included Advances in Thin Film Coatings. The proceedings comprises a total of 18 papers with four of the papers having been presented in a poster session on one day, and the other 14 were presented as oral papers on a second day in five sessions. About half of the authors are from North America. Taiwan was strongly represented with eight papers. Only two papers were from Europe, perhaps because the Optical System Design conference was held in France only two weeks later. As in the past, the papers cover a broad range of subjects, as is evident by an examination of the Table of Contents. Current Developments in Lens Design and Optical Engineering serves the multi-faceted discipline and the multi-talented individuals that dedicate themselves to this field.
