Foreword

This conference is the 13th of the OFS series and is the first to be held in Korea. Since the first conference in 1983, the OFS meetings have been held approximately every one and a half years, providing an exciting forum for reporting and discussing latest progress in optical fiber sensors and related components. As in the previous meetings, this conference presents many exciting invited and contributed papers, with rapidly advancing commercial application of fiber sensor technologies. For example, oil and gas monitoring sensors and fiber grating sensors show considerable growth. A special feature added to this conference is the half-day workshop on "Device and system technology toward future optical fiber communication and sensing" that is intended for stimulating closer interaction between the communities working on sensors and communications.

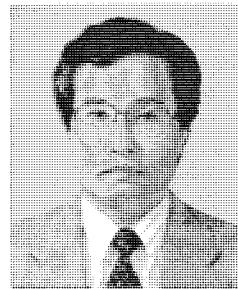

In recent years, we have witnessed the economic problems in many countries including this part of the world, which are gradually being overcome. On the other hand, we are also witnessing an explosive growth of optical communications both in market and technologies. It is well known that many of the key technologies used in optical communications are adopted directly from those developed for fiber sensors. For example, many basic components for wavelength division multiplexed systems can be found somewhere in the past OFS proceedings. It is safe to say that the loyal participants in the OFS conferences are the leaders of fiber optics technologies not only for the sensors but also for communications. This tradition of introducing innovations in optical fiber technology continues on at OFS-13, and will do so in the future.

We would like to thank the members of the Technical Program Committee for putting together the high quality technical program. The local organizing committee members both in Korea and in Japan worked hard to make the conference successful, and proved that joint international efforts can really work nicely. We would like to extend our thanks to any scientists and engineers who are actively participating, and to supporting organizations for their financial support.

We hope that you enjoy not only the conference but also the ancient capital city of Shilla Kingdom at the peak of the cherry blossom.
