International Conference on X-Ray Lasers 2020

Davide Bleiner
Editor

8–10 December 2020
Online Only

Organized by
Davide Bleiner, Empa, Materials Science & Technology (Switzerland)
David Spichiger, Swiss Chemical Society (Switzerland)

Sponsored by
Empa, Materials Science & Technology (Switzerland)
Laserlab Europe (European Union)
Elettra Sincrotrone Trieste (Italy)
European X-ray Spectrometry Association (Hungary)
Applied Nanofools (Canada)
Greateyes (Germany)
Lumibird (France)
Luxel (United States)
Rigaku Innovative Technologies (Japan)
XUV Lasers (United States)

Published by
SPIE

Volume 11886
The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIEDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

ISSN: 0277-786X
ISSN: 1996-756X (electronic)
ISBN: 97815106464186

Paper Numbering: A unique citation identifier (CID) number is assigned to each article in the Proceedings of SPIE at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:
- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.
## Contents

### INTRODUCTION

| 11886 02 | The science and technology of X-ray lasers: a 2020 update [11886-100] |

### SESSION 1  X-RAY LASERS ON A TABLETOP: PAST & PRESENT

| 11886 03 | First seeds of X-ray lasers: a tribute to Pierre Jaeglé [11886-25] |
| 11886 04 | X-ray lasers: the evolution from Star Wars to the table-top [11886-14] |
| 11886 05 | A brief history of short wavelength coherent radiation sources [11886-1] |
| 11886 06 | Demonstration of Multi-Hz repetition rate X-ray lasers at shorter wavelengths [11886-32] |

### SESSION 2  ADVANCED X-RAY LASERS: FROM HIGH-END FACILITY TO TABLETOP

| 11886 07 | EMPULSE: a compact terawatt chirped pulse amplification laser for generating coherent x-rays [11886-33] |
| 11886 08 | Update on laser-driven X-ray sources at ELI Beamlines [11886-27] |
| 11886 09 | Inverse compton scattering X-ray source for research, industry and medical applications [11886-16] |
| 11886 0A | Tomographic characterization of gas jets for laser-plasma acceleration with increased sensitivity [11886-9] |
| 11886 0B | Solid-target seeded soft X-ray laser for short pulses and optical vortex amplification [11886-29] |
| 11886 0C | 2D-3D multiscale modelling of inhomogeneous plasma amplifiers [11886-23] |
| 11886 0D | X-ray laser development at the Institute of Laser Engineering, Osaka University with worldwide collaboration [11886-8] |
| 11886 0E | An approach for realizing four-wave-mixing experiments stimulated by two-color extreme ultraviolet pulses [11886-28] |
| 11886 0F | Four-wave mixing with multi-color laser in extreme ultraviolet region [11886-7] |
Efficient extreme-ultraviolet multi-band high-order wave mixing in silica [11886-21]

Ultra-strong attosecond laser focus produced by a relativistic-flying parabolic mirror [11886-19]

Temporal and spectral control of the X-ray pulses in a resonant medium with a modulated transition frequency [11886-17]

SESSION 3 ADVANCES ON X-RAY LASER OPTICS & METHODS

Phase-Contrast Tomography with X-ray Hartmann wavefront sensor [11886-10]

Numerical investigation of the effect of number of zones on Fresnel Zone Plates imaging performance under different coherence conditions [11886-39]

Single-shot wavefront characterization of high topological charge extreme-ultraviolet vortex [11886-4]

On the use of multilayer Laue lenses with X-ray free electron lasers [11886-20]

Temporal characterization of a plasma-based seeded XUV laser using a laser-dressed photoionization technique [11886-30]

Single-shot picosecond resolution Fourier transform holographic microscopy with large field of view using a compact soft X-ray laser [11886-31]

Multiscale lensless imaging with a plasma X-ray laser [11886-34]

Phase-contrast imaging with laser-plasma-accelerator betatron sources [11886-5]

SESSION 4 LABORATORY X-RAY LASERS: PRESENT & FUTURE APPLICATIONS

Short pulse soft X-ray laser ablation research [11886-2]

Energy and charge distribution of Si ions in EUV ablation plasma [11886-26]

The role of photo-ionization in extreme ultraviolet ablation interactions [11886-3]

Coherent pore-scale imaging: phase contrast and ptychography [11886-12]

Composition analysis of boron carbide coatings prepared by reactive sputtering with nitrogen [11886-22]

Hydrogen induced trap states in TiO₂ probed by resonant X-ray photoemission [11886-18]
